# explore

LAST UPDATED: 08/09/17 3:30PM

Explore works on all modern web browsers including Microsoft Edge, Chrome, Safari and Firefox.
Based on community feedback and extensive testing, we recommend using GOOGLE CHROME for the fastest experience.

https://www.google.com/chrome/browser/desktop/index.html
or search for google chrome installer

We recommend going into fullscreen mode on all browsers for the best immersive experience.

You can turn this mode on/off by the following hot keys:
(shift-window-enter) Microsoft Edge
(control-command-F) Google Chrome / Safari / Firefox

Is your screen still too small?
(Control -) adjusts the size of the content within your browser smaller and (Control +) Bigger.
We recommend clicking (Control -) a few times to reduce your size of the content to fit your screen size.

Using an iPad or other tablet?
The portrait mode works best where the device is oriented vertically.

BROWN BEARS — LIVE

**Brooks Falls Brown Bears**
BROOKS FALLS - KATMAI NATIONAL PARK, ALASKA, USA

Welcome to Brooks Falls in Alaska's Katmai National Park and Preserve. Every summer, the brown bears of Katmai flock to Brooks Falls to hunt the sockeye salmon fighting their way upstream to spawn. Watch salmon leaping up the falls and the brown bears fishing with their young. You'll see the most bear action on this cam in July and August, but keep an eye out for bald eagles and seagulls flying overhead... and, if you're lucky, maybe even a wolf or moose!

BROWN BEAR INFORMATION ⌄

**When will I see the most bears?**
The most activity on the bear cams here in Katmai National Park and Preserve happens in July and September. Bears seek out the places where they can get the most fish with the least amount of energy, and the location of these places shift throughout the summer. In July and September, Brooks River has a high overall density of fish, but in August, smaller streams in the area tend to have more salmon, so bears will follow them there.

**Where is the bear cam located?**
This live bear cam overlooks Brooks Falls on the Brooks River, located in Alaska's stunning Katmai National Park and Preserve.

**Why do bears come to this particular place?**
After the bears of Katmai emerge from hibernation in the spring, they descend on a mile-long stretch of the Brooks River, where sockeye salmon are migrating upstream to spawn.

The waterfalls in this cam create a temporary barrier for salmon as they swim, making it an ideal fishing spot for hungry brown bears.

**Are brown bears and grizzly bears the same species?**
Technically, yes. Grizzly bears are considered to be a subspecies, but the differences between the two are arbitrary; "grizzly bear" is often used to refer to bears further inland, while "brown bears" have access to coastal areas. As a result of their locations, brown bears tend to eat more fish than grizzly bears and are often slightly larger.

**Where else do brown bears live?**
Brown bears are the most widely distributed bears in the world, found in the forests, mountains, and coastal areas of the northern part of North America, Europe, and Asia.
